

Essencia Carbon Cartridge Installation Instructions

- Remove cardboard collar from top of Cartridge.
- **Prime the Cartridge** by immersing it in water for 2 hrs or until it sinks.
- Turn the Cartridge upside down to drain the excess water before fitting it to the Upper Reservoir.
- Be careful to screw the Carbon Cartridge in straight.
- Tighten the Carbon Cartridge only until the O ring makes contact with the bottom of the upper reservoir and seals. Over tightening the Cartridge will cause the thread to break.
- The Carbon Cartridge **must** be replaced after processing 5 batches, or approx. 45 litres of spirit at 40% ABV to ensure the effective removal of contaminants.

1	2	3	4	5
